Favourite product:
LUGGED ELBOW

“ I CAN HONESTLY SAY IN ALL THE TIME WE’VE USED IT, WE NEVER HAD A PROBLEM WITH IT. THE FITTINGS ARE GOOD. THE PIPE IS GOOD. IT’S STRONG. WE LIKE IT. IF OTHER PLUMBERS AREN’T USING IT, THEY’RE MISSING OUT. ”

ALL IN THE FAMILY

Grant Ferguson has been a plumber for forty years and for nearly half of that time he's used Auspex. In fact within six months of its launch he was on board and hasn't looked back. And with what Grant estimates at over 1,000,000 crimps under his belt it's not surprising that his two boys, Andy and Ricky, having grown up with Auspex, are also avid fans and wouldn't consider changing. Not that dad would let them anyway.

For Grant, the key reason he's stuck with Auspex for so long is simple really. Reliability and speed. The time it saves and confidence he has means his team can get more work done. For instance a job that may have taken a day in the past is now installed in hours. Two jobs completed in one day is fantastic as far as he's concerned.

So as long as Grant's in charge, and he reckons that's going to be a while longer yet, Auspex will be their weapon of choice. And with Andy the self proclaimed master crimper in the team it's sure to be an ongoing tradition.

1997

1997 was a big year for John and Glenn Bines, the father and son team who brought a whole new way of plumbing to Australia. Not content with retirement, it was John who first discovered the PE-X products in Europe and jumped at the chance to bring it home. After roping in his son Glenn, they worked for three solid years with test after test to ensure the product would work in Australian conditions. So in 1997 when they were satisfied they had something great, they launched Auspex and haven't looked back.

“ WITH JOHN HOLDING THE FORT IN MELBOURNE, I PACKED THE STATION WAGON WITH PRODUCT AND HEADED OUT TO SELL THE AUSPEX MESSAGE. '97 WAS A BIG YEAR! ”

FOCUS

The commitment and focus that helped John and Glenn launch Auspex has maintained, and in many ways got stronger over the years. Not happy sticking with their core range of products and tools, they have continued to evolve with one goal in mind – to give plumbers a reliable and time saving product they can trust. Whether it's the ever-growing range of adaptors or the fittings and pipe, they are focussed on quality. From day one they've had a philosophy of 'measure twice, cut once' because they understand it's not good enough to have a good product – you want a great product.

B-PRESS COPPER ADAPTER

“ YOU GET FINISHED A LOT QUICKER WHICH GIVES YOU MORE TIME FOR YOURSELF. AND I LIKE GETTING HOME AT A REASONABLE TIME BECAUSE FAMILY TIME IS VERY IMPORTANT. ”

PERFECT FIT

Cut. Fit. Crimp. Done. Auspex fittings deliver fast and reliable joints in seconds. That's because they're all manufactured and tested to comply with AS2537 and carry the Watermark Licence No.1711. Got to love that. And with a large selection of couplings, tees and elbows, plus adapters on hand, you're also armed with the flexibility to get any job done right.

RANGE

One of the more colourful Auspex stories is our PE-X pipe. Manufactured right here in Australia we've got black pipe, green pipe, red pipe and lilac pipe, but it goes deeper than that for us, we care about what's on the inside. Made from only the highest quality Cross-Linked Polyethylene, we've created a lightweight and easy to transport pipe that offers tighter manual bending for hassle free installation. Match that with our full 25 year warranty and range of sizes including 16mm, 20mm, 25mm and 32mm, and you've got some really great pipe.

Having the best tools has always been something we've prided ourselves on. Whether it was the original hand tool we introduced back in the day or the mechanical tool we moved to in more recent years. We have continually focussed on ensuring any crimp you do is fast and solid.

We've got no time for leaks. And now we've stepped it up again by joining forces with Rothenberger – the global leader in tools. When connected to the Auspex and Duopex heads, the Romax 3000 and Compact tools will give you the fastest and most precise joints possible.

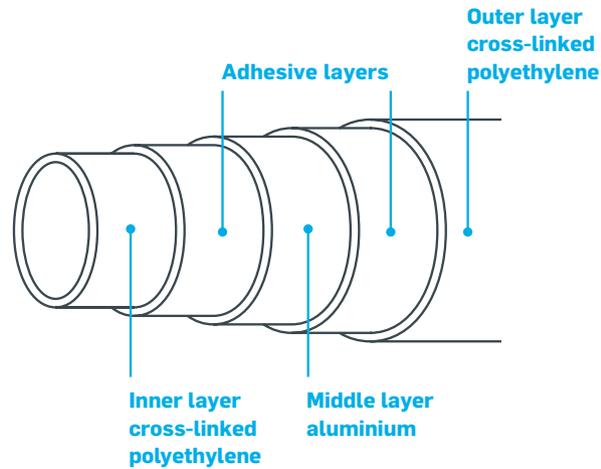

We reckon that's pretty handy.

HANDY

DUOPEX

What do you do if you improve on PE-X so it can be used for even more applications? Add more layers. Made up of Cross-Linked Polyethylene and aluminium layers the pipe delivers superior performance under all types of conditions. The advanced design also ensures form stability for safe installation, particularly when curved. And it's lightweight and easy to carry.

Duopex Water uses the multilayer pipe system for potable hot and cold-water applications. Available in 16-63 mm diameters, it's made to handle the big stuff. And when combined with our DR brass fittings and stainless steel crimp ring it's also quicker and easier than other systems.

Certified in accordance with AS4176 and with a Watermark License, Duopex Water sets the standard.

WATER

GAS

With its smooth inner pipe layer, Duopex Gas delivers excellent flow rates across a broad range of temperatures. Impermeable to oxygen and gases in general, Duopex Gas guarantees long life and reliability. Using DR brass fittings and a stainless steel crimp ring this system is available from 16 to 63 mm and is quick and easy to use. Duopex Gas is tested in accordance with AS4176 and carries a license number and Standard mark.

“ I TRUST AUSPEX,
I’VE BEEN USING IT
FOR A LONG TIME.
IT’S NEVER LET ME
DOWN. IT’S QUICK
AND EFFICIENT.
I’VE NEVER FOUND
ANYTHING ELSE
TO MATCH IT. ”

THE RADIANT PIPE

Let's face it no matter how tough you are, everyone loves a bit of warmth under your feet. So imagine how much love you'd get from your customers by offering them supreme comfort and excellent efficiency with the Auspex Radiant Underfloor heating system. The complete in-slab solution designed to suit Australian building practices.

The system has all the components required to perform the installation including Auspex Radiant pipes and crimp systems, manifolds, control valves as well as our time saving Smart Clips for fixing the pipe to reinforcing mesh.

And of course you don't have to work this out all on your own. Through Auspex certified training, you can obtain a complete understanding of the system and procedures for compliant installation.
