Notes:

PE Long term rupture stress at 20°C (MPa x 10)
to which a minimum design factor is applied to
obtain the 20°C hydrostatic design hoop stress.

PN Pipe pressure rating at 20°C (MPa x 10).

SDR Nominal ratio of outside diameter to
wall thickness.

Electrofusion Fittings

Electrofusion fittings (EF) are an integral part of PE pipe installations for water, gas and industrial systems. Contact your nearest Reece Civil branch for more information on accredited training courses for EF welding, the range of EF fittings available and required installation tools.

Key points to remember when installing pipelines using EF are:

Training

Ensure you are trained and accredited in EF welding. Follow the installation instructions and industry guidelines for the fittings and tools you are using during the installation.

Peel

Use the correct tools to peel the pipe prior to welding. Rotational peelers do the best job and are recommended by all EF manufacturers.

Clean

Keep the prepared welding surfaces clean. Use EF welding approved isopropanol wipes to clean the welding surface prior to assembly and welding.

Secure

Keep the joint aligned and free from movement and bending forces during the weld with the recommended alignment clamps.

Reece Civil is dedicated to supplying only the best products for underground pipe networks, including water mains, sewer mains, gas mains, telecommunications, drainage, electrical and fire services.

With our growing national network of branches and our dedicated fleet of Heavy Crane Trucks. We have the resources to service your business, from the smallest company to the largest contractor. Our network of Civil branches are all backed by Reece's efficient, on time delivery service to ensure that your products are only a phone call away. Our well stocked branches ensure that when you need parts in a hurry, they are never far away. Our staff have a wide range of civil industry experience and can help you source and specify the most appropriate products for any project.
